

# PLANTS OF THE CLAREMONT CANYON WATERSHED

## Kay's Master List

This list documents plant species growing wild in the Claremont Canyon watershed. The list is compiled from several different lists, primary among them the EBRPD list of plants in the Claremont Canyon Regional Preserve. As additional species are identified and documented, they will be included in this 'master list.' Wild plants frequently seem to have more than one accepted common name. For that reason I have chosen to present this list sorted by both scientific name and common name. I make no claims however to have found all the possible variations of common name!

KEY: Fm=plant growth form (Fern, Grass, Herbaceous, Woody); i/n=introduced or native.
