

PLANTS OF THE CLAREMONT CANYON WATERSHED

Kay's Master List

This list documents approximately 375 plant species growing wild in the Claremont Canyon watershed. The list is compiled from several different lists, primary among them the EBRPD list of plants in the Claremont Canyon Regional Preserve. As additional species are identified and documented, they will be included in this 'master list.' Wild plants frequently have several accepted common names. I have chosen to present this list sorted by both scientific name and common name; but I make no claim to have found the most popular common name!

KEY: Fm=plant growth form (Fern, Grass, Herbaceous, Woody); i/n=introduced or native.
